Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 29 Row: h Column: 1 This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                      This sequence represents an endoplasmic reticulum protein (WAR-1) amino acid sequence. The invention includes rat and human WAR-1 sequences, expression vectors containing the DNA, cells transformed with the expression vector, antibodies against WAR-1, and probes and primers which hybridise to the DNA encoding WAR-1. The WAR-1 protein inhibits the proliferation of cancer cells, and is used in the treatment and diagnosis of cancers including highly malignant sarcomas.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as imaging of sites expressing (II). (I) are useful in medical cinsorders involving partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical cinsorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cid sequences ABG00010-ABG30377 represent novel human constitution, but was obtained in electronic format directly from WIPO very

The present invention describes a screening method for secretory and membrane proteins consisting of transformation of a cell with separate expression vectors for the sense and antisense RNA of DNA encoding an endoplasmic reticulum membrane protein participating in endoplasmic reticulum transport of proteins. Also described are: (1) secretory and cell membrane proteins identified by the screening method; (2) drug compositions containing these proteins; (3) host cells transformed by the separate expression vectors of the method; and (4) the preparation of secretory and cell membrane proteins by culture of the transformants. The method can be used for the identification and preparation of proteins for use in the treatment and prevention of diseases such as cancer, disorders of the nervous system, immune disorders (including allergies and rheumatism) and skeletal disorders. The present sequence in the transformed human WAR-I protein from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA assily encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.

The invention includes rat and human WAR-1 sequences, expression vectors containing the DNA, cells transformed with the expression vector, antibodies against WAR-1, and probes and primers which hybridise to the DNA encoding WAR-1. The WAR-1 protein inhibits the proliferation of cancer cells, and is used in the treatment and diagnosis of cancers including highly malignant sarcomas.

The present invention describes a screening method for secretory and membrane proteins consisting of transformation of a cell with separate membrane proteins consisting of transformation of a cell with separate expression vectors for the sense and antisense RNA of DNA encoding an endoplasmic reticulum membrane protein participating in endoplasmic reticulum transport of proteins. Also described are: (1) secretory and cell membrane proteins identified by the screening method; (2) drug compositions containing these proteins; (3) host cells transformed by the separate expression vectors of the method; and (4) the preparation of secretory and cell membrane proteins by culture of the transformants. The method can be used for the identification and preparation of proteins for use in the treatment and prevention of diseases such as cancer, disorders of the nervous system, immune disorders (including allergies and rheumatism) and skeletral disorders. The present sequence invention is a specifically claimed rat WAR-1 protein from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiarthmatic; antiarthmitic; antidiamatory; antithyroid; antilallergic; antidacterial; antidiant; dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antianglogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection;

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB4239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antithyroid; antiarthritic; antidiabetic; antiasthmatic; antithyroid; antidiabetic; antiasthmatic; antithyroid; antidiabetic; coagulant; carmatological; neuroprotective; cardiant; thrombolytic; coagulant; noctropic; vasotropic; antipsoriatic and antiangiogenic. The noctropic; vasotropic; antipsoriatic and antiangiogenic. The coagulant; noctropic; vasotropic; antipsoriatic and antiangiogenic andiorating medical conditions and diagnosing pathological conditions. Coagulant; not medical conditions and integration pathological conditions. Coagulant; and integrating or inhibiting the proliferation of fiferentiation or mobilisation of immune cells, to treat disorders of haematopotetic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The petrological disease and bacterial or viral infections. The petrological disease and chargonists and antagonists may be also be used in drug screens. AAC78451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 AAEEQATGSKSLYYYGVKDLATVFFYMLVAIIIHATIQEYVLDKINKRMQFTKAKQNKFN 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  expressed at high level in normal prostatic tissue. Polypeptides (1) encoded by (A) are used: (a) for identifying agents for treatment of prostatic cancer and (b) for therapy of prostatic cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (1), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before these are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTs. AAV48304-Y48456 represent peptides encoded by the expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid expressed at high level in normal prostatic tissue and encoded polypeptides, used to treat cancer and screen for therapeutic

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB7737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

The invention i useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176,ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; SEQ ID NO 25134; 21pp + Sequence Listing; English.

useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 298 IAVLSSSCTIQAYVTWNLITLWLQRWVEDSNIQASCMKKKRSRSSKKRTENGVGVETSNR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                   The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    life-span limiting domain (see AAR86812) and a life-span extending domain (see AAR86812) and a life-span extending domain (see AAR86811). Overexpression of the LAG1 gene in older cells has a rejuvenating effect, which not only increases replication and so reproductive capacity and cellular tolerance to stress factors such as starvation and low pH. These cells may be used for the production of recombinant proteins. By increasing the life span of recombinant cells, the need for overexpression of recombinant gene products is avoided, and therefore any subsequent adverse effects on the host cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LSDPTLIWKARPHSMMTFQMKFFYISQLAYWFHAFPELYFQKTKKQDIPRQLVYIGL-HL

This sequence is the human longevity-assurance protein homologue of
the invention, designated LAPH-1. LAPH-1 and LAPH-2 are involved in
signal transduction and cell cycle regulation, and may play a role in
regulating the balance between cell proliferation and apoptosis.

Increased expression of LAPH-1 or LAPH-2 may increase susceptibility to
disregulation of cellular homeostatic pathways. Antagonists of LAPH-1 or
LAPH-2 can be used to treat a disorder associated with disregulation of
cellular homeostasis or with aging, cancers, disorders associated
with inflammation or autoimmune disease including AIDS, Addison's
disease, adult respiratory distress syndrome, allergies, anaemia, asthma,
therosclerosis, bronchitis, cholecystitis, Crohn's disease, ulcerative
colitis, atopic dermatitis, dermatomyositis, diabetes mellitus,
colitis, atopic dermatitis, dermatomyositis, diabetes mellitus,
colitis, atopic dermatitis, dermatomyositis, diabetes mellitus,
colitis, atopic dermatitis, matchinia, irritable bowel syndrome,
colitis, atopic dermatitis, pancreatitis, rheumatoid arthritis,
costeoarthritis, osteoporosis, pancreatitis, rheumatoid arthritis,
costeoarthritis, syndrome, and autoimmune thyroidisis, infections,
neurodegenerative disorders including Alzheimer's disease, ammesia,
amyotrophic lateral sclerosis, bipolar disorder, catatonia, dementia,
depression, Down's syndrome, tardive dyskinesia, distonias, epilepsy,
Huntington's disease, multiple sclerosis, neurofibromatosis, Parkinson's
disease, schizophrenia, and Tourette's disorder, and myelodysplastic
                                                                                                                                                                                                                                                                                                  New isolated human longevity-assurance protein homologues - used to develop products for treating disorders associated with disregulation of cellular homeostasis or with ageing
                                                                                                                                                                                     Shah P;
                                                                                                                                                                                     Lal P,
                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Fig 1; 101pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                           6, 2002, 17:10:38; Search time 28.82 Seconds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequence 13, Sequence 13, Sequence 2, A Sequence 2, A Sequence 13, Sequence 6, A Sequence 6, A Sequence 2, A Sequence 1, A Sequence 2, A Sequence 1, A Sequence 2, A Sequence 1, A Sequence 2, A Sequence 1, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Sequence 3, A Seque
